Unleashing Nature's Potential

EASY GROW COIR NETTING® Erosion Control Knitted Fiber Net.

GrowGreenEcoSolutions® has gained extensive expertise in erosion control issues and learned to use organic and environmentally friendly products, such as Coco-Peat, Coco-Fiber and selected compost types. These solutions have been adapted in both North America and Europe over the last 15 years.

GrowGreenEcoSolutions® supplies excellent **Erosion Control Eco Coir Wattles** to prevent unnecessary erosion on slopes, water runs, run-off from construction sites and other commercial applications such as in vineyards.

GrowGreenEcoSolutions® has many years of experience in erosion control with organic substances and are more than happy to help you in finding the right solution to erosion problems you have to eliminate.

On slopes soil erosion is a worldwide problem. In these circumstances people may find short term solution however in the end these short-term solutions create larger erosion control problems. However, creating a smooth run-off for water, erosion can be controlled by making sure the slope can retain more water and fast-moving water is slowed down by creating a ripple effect on the slopes so that water flow can be controlled very efficiently. With expertise advice and their cooperation

Our EASYGROWCOIRNETT® Erosion Control Eco Coir Wattles effectively traps sediment and improves water quality. The wattles filter over land water flow, trapping and holding sediment on the bank that would otherwise end up in the water or in the dry areas below. Eco-Wattles are the best alternative to temporary sediment control products such as straw, hay bales or wattles.

GrowGreenEcoSolutions® Eco Coir Wattles work well, when sitting directly in water and out of water, on slopes and can hold the site stable for 4-6 years. This gives sprouting seeds ample time to develop an intricate root system that will continue the task of stabilization after the wattles have decomposed. The lightly packed coir fiber allows cleaner water to pass through the Eco-wattle leaving sediment behind.

GrowGreenEcoSolutions® Eco Coir Wattles physical properties test certificate is available upon request.

GrowGreenEcoSolutions® supplies Eco-Geotextiles intertwined, weave & weft, and both machine and handspun out of coir fibers. They are perfect for erosion control on slopes and stream banks. They are also used for decoration and sound barriers. Our products have a long durability to ensure the natural vegetation has time to create its own erosion protection in a period of 4 to 6 years.

Sizes: On Customer Request Made to Order
